

World Space Week 2013 Celebration

In observance with the 2013 World Space Week, the Rizal Technological University Astronomy Society held a star party following WSW 2013's theme "Exploring Mars, Exploring Earth", at the university quadrangle last October 10, 2013.

The university stage and quadrangle were readied at around 3:00 p.m. Exhibits from the students of B.S. Astronomy Technology were strategically placed and seats were prepared. Unfortunately, torrential rain suddenly poured just when the event was about to start. The rain continued for hours, drenching exhibits and equipment, thus making the event deferred.

However, the students continued the celebration by transferring to the gallery room of the Research and Development Building. There, they held the General Assembly impromptu party which was postponed previously. Games with connection to astronomy were done as well as the intermission numbers which were reserved for the adjourned star party. The participants still had lots of fun in spite of the event's postponement.

Having Fun at the Party
